1 Problem 1

1.1 Discussion

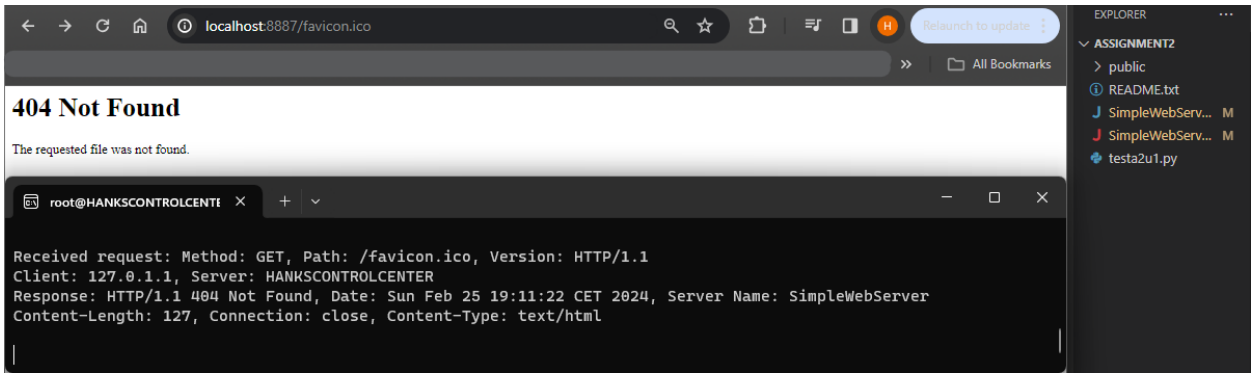
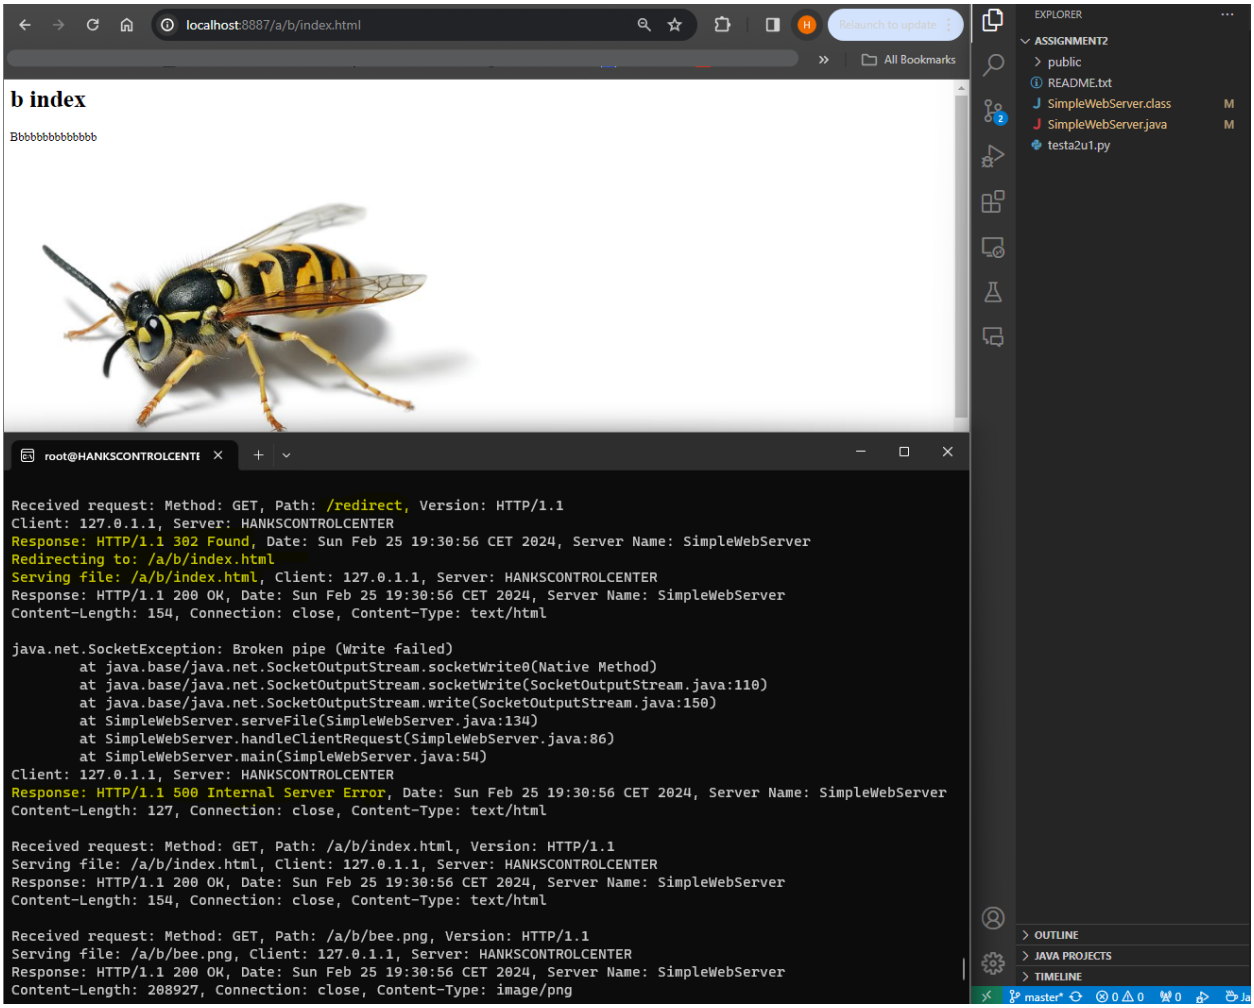
When we first worked on the assignment, this section was good and passing the python tests, we can't seem to get a connection established now, in addition the PrintWriter does not work correctly anymore therefore we implemented sysout prints in order to show that we were able to acquire all of the relevant data. However the server does work as intended.

2 Problem 2

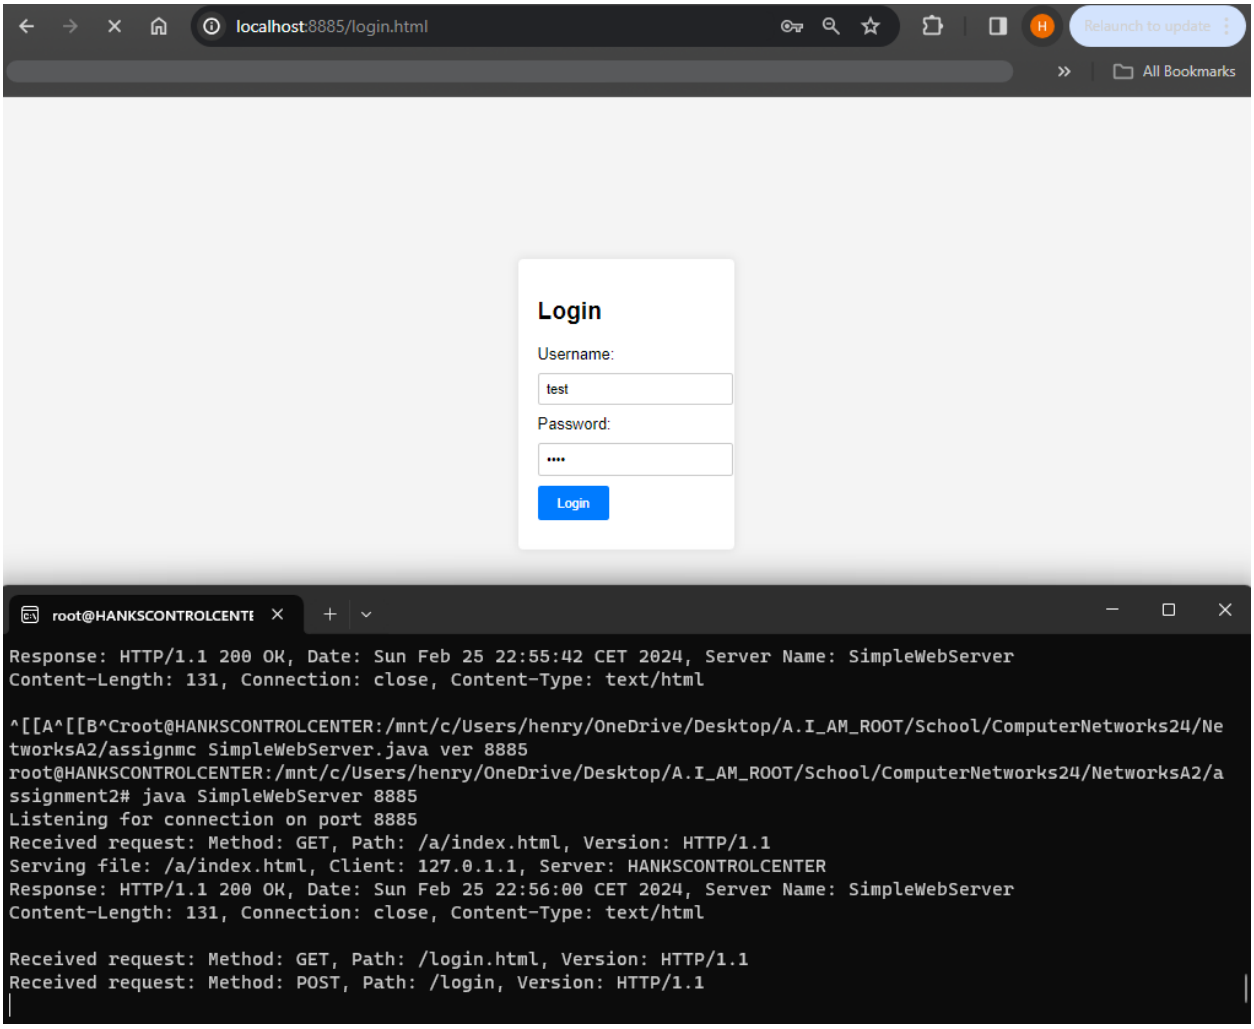




2.1 Discussion

Redirection breaks the pipe and we had trouble fixing it. Breaking the pipe is bad and all, but it gave the perfect opportunity to show both the redirection(302) and the internal server error(500).

3 Problem 3



3.1 Discussion

We could not handle the post condition and therefore did not get to the PNG adder.

4. Closing Comments

We are hoping to receive some guidance about the mentioned problems. Anything is appreciated whether it is just a reference to a lecture slide we might have missed or a small hint. Thanks.
